

The following was researched from the Secure Area Inspection file, requests, between 1 July 72 and 30 June 1973, for secure vault areas. The research was done to establish why the equipment inventory (vault portion) does not compare with requests and surveys for renovation of new vault areas in 1973.

19 requests for survey - 3 involved Key Building  
 (2 - OF; 1 -  (only 1 was new, one was STATSPEC expansion of existing vault and one was merely a request to move into an existing secure area.)

- 17 involved Headquarters

Of the 17 at Headquarters, two were DDO's requests. DDO did not report vaults in the 1973 inventory.

Of the remaining 15 requests, action involved 16 secure areas:

- 12 were requests for new secure areas
- 1 was a continuation of existing area with adjustments
- 3 were requests for expansion of existing areas

In the inventory 14 vaults reported as additional  
 6 vaults not accounted for in inventory showing decrease

#### FACTORS THAT AFFECT THE INVENTORY:

1. OS or OL can turn down requests after RAB approves them and RAB is not notified.
2. RAB is not notified if a vault is deactivated, or completed.
3. In reorganizations, offices may move into and out of vault areas without notifying RAB. This may account for unexplained increases and decreases for which RAB does not have a survey request on file.
